

ABSTRACT:

The invention relates to a double-flow exhaust system for an internal-combustion engine, having exhaust-gas-carrying pipes (2, 4, 10, 12, 18, 20) and at least one muffler and catalyst housing (14, 16, 22, 24, 26, 28). It is suggested that a separate end muffler (26, 28) is provided for each exhaust line, which end mufflers (26, 28) are both fluidically connected by at least one preferably mountable connection pipe (30, 36).
